Adios al EtBr!!!

EtBr Destroyer

Favorgen EtBr Destroyer is a specifically designed reagent effectively degrade and destroy the Ethidium Bromide and result in non-fluorescence and non-mutagenic remain. And also it has been demonstrated that its effectiveness of destructing the SYBR DYE.

1 Chemical Degradation of Ethidium Bromide

CCN1C(=C2C(=C(C=C2)N)C(=C3C(=C(C=C3)N)N1)Br

2 EtBr Destroyer Spray

CCN1C(=C2C(=C(C=C2)N)C(=O)C1)Br

3 The Structure Change means EtBr is unable to intercalate DNA

Non treatment of solid EtBr Contaminant

Treatment of solid EtBr Contaminant

EtBr Destroyer Application for Liquid EtBr Contaminant

I.V.A. NO INCLUIDO EN LOS PRECIOS

EtBr Destroyer

This product is provided in two different formats for the treatment of solid or liquid Ethidium Bromide contaminant. The ready pack Favorgen EtBr Destroyer Bag is for the treatment of liquid Ethidium Bromide Contaminant. The Favorgen EtBr Destroyer Sprayer is for the treatment of solid Ethidium Bromide contaminant.

Effective:

EtBr destroyer can destroy EtBr and other SYBR Dye. This effect can be monitored and confirmed by UV light exposure. Once destroyed, the fluorescence will disappear. The blocking of mutagenic effect of EtBr Destroyer has been demonstrated by Ames Test.

Specific:

Two specific designs are for different purposes: EtBr solid contaminant treatment and EtBr liquid contaminant treatment, i.e. the sprayer format and the ready pack format.

Economical:

1. EtBr destroyer sprayer content can be refilled after use up. The cost is very economic.
2. After EtBr Destroyer treatment, the Ethidium Bromide-Containing Buffer can be save for further use after being filtrated. The reduction of waste volume can save the cost of waste treatment.

Safe:

The blocking of mutagenic effect of EtBr Destroyer has been demonstrated by Ames Test.

Order Information:

Catalogue No.	Description	Packing
FAEBD-001	Favorgen EtBr Destroyer Bag 1 bag can be use up to 3L EtBr solution.	20 Bags / Box
FAEBD-002	Favorgen EtBr Destroyer Sprayer, Each spray contains 0.4ml, 1 sprayer can be used up to 600 times	Spray 2x200ml.

Sprayer 2x200ml

RedSafe™ Nucleic Acid Staining Solution

Adios al EtBr!!!!

Energetic iNtRON !!

Energetic iNtRON promises to you to be the origin of energy in Biotechnology!
Do take our energy!!!

*Good bye ~
EtBr*

RedSafe™ Nucleic Acid Staining Solution (20,000x)

- RedSafe™ is sensitive, stable and environmentally safe for nucleic acid staining in agarose gel to replace the high toxic EtBr
- Much fewer mutations than EtBr staining to isolate DNA fragments for subcloning

**EtBr
NO !!!!!**

Characteristics

- Used for detecting DNA and RNA
- Alternative to the ethidium bromide staining
- As sensitive as EtBr or more sensitive than it
- Non-toxic, non-mutagenic and non-carcinogenic
- No hazard waste (safely disposed of down the drain)

PRO-PREP™

Cat. No. : 17801

PRO-PREP™ Protein Extraction Solution (for Cell/Tissue)

Incredible Solution !!!

Don't spend your time to make RIPA Buffer anymore.

Characteristics

- (1) Save time
- (2) Increase the protein stability
- (3) No protein degradation
- (4) Easy to use: Single solution type
- (5) 5 Protease inhibitors included in the solution

SDS-PAGE gel Electrophoresis

Total proteins were isolated from various cancer cell lines and tissues by the PRO-PREP™ Protein Extraction Solution.

We can extract the subcutaneous fat contained large amount of fat.

Lane M, PRO-STAIN I Marker Lane 1, K562 Lane 2, SNU 1 Lane 3, SNU 5
Lane 4, B16 Lane 5, rat Heart Lane 6, cow muscle Lane 7, cow subcutaneous fat

Simple protocol

Cells or Tissues preparation
↓
Add PRO-PREP Solution
↓
Incubate on -20 °C for 10min
↓
Spin down
Just 10 ~ 15 min
No protease inhibitor

NOTICE

5 Protease inhibitors are included !

PMSF : Inhibit serine protease and thiol protease

EDTA : Inhibit metalloprotease

Pepstatin A : Inhibit acid protease

Leupeptin : Inhibit serine protease

Aprotinin : Inhibit serine protease and thiol protease

110€ Envase 100ml

West-one™ Western Blot Detection System

WEST-one™ Western Blot Detection System is quite different from most western blot detection kits, which consist of substrate solution and enhancer solution. WEST-one™ Kit consists of just one spray bottle, which is a very simple method for detection. The most remarkable feature of the WEST-one™ Kit is; there is no need to mix solutions (substrate solution and enhancer solution). The WEST-one™ Kit is based on the principle that hydroxide ion(OH-) generated by horseradish peroxidase in aprotic media results in transition of luminol to 3'-aminophthalate, which induces emission of 425-510nm light. The X-ray film is exposed to the light to show a specific protein band.

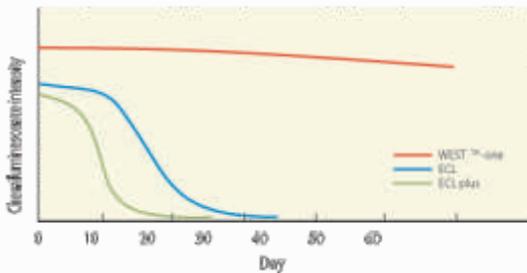

Long lasting activity: - activity duration test after mixing A, B reagent

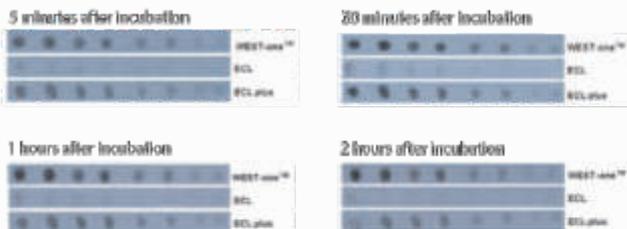

The activity of WEST-one™ kit was sustained after 16 weeks. We guarantee 12 months of activity. Lane 1-4: diluted total protein (20%, 10%, 5%, 2.5%)

The α -tubulin protein was detected by using reagent A and B reagents from a supplier A (0 day, 1 week, 2 week). The activity of reagent was tested up after 5 - 30 days. Lane 1-4: diluted total protein (20%, 10%, 5%, 2.5%)

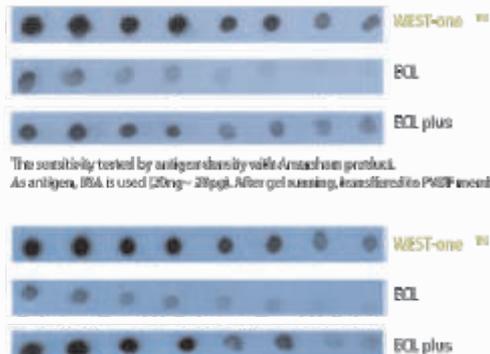

Sensitivity and signal duration test

Test data for duration time of each product among ECL, ECL plus and WEST-one. As a antigen, BSA is used (50ng). After gel washing, transferred to PVDF membrane.

Sensitivity test

The sensitivity tested by antigen density with Amersham product. As a antigen, BSA is used (10ng - 20pg). After gel washing, transferred to PVDF membrane.

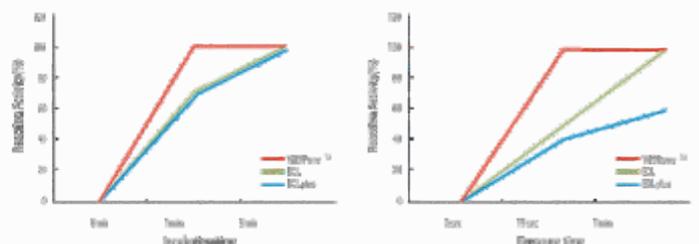

The sensitivity tested by 2nd antibody density with Amersham. As a antigen, BSA is used (50ng). After gel washing, transferred to PVDF membrane.

Incubation and expose time test

Incubation Time	Exposure Time	WEST-one™	ECL	ECL plus
1 min	1 min	HHH	H	HH
1 min	15 sec	HHH	H	HH
5 min	1 min	HHH	HH	HHH
5 min	15 sec	HHH	H	HH

Comparison of sensitivity by differentiation of incubation and exposure time. Only we test the last step according to each company's protocol. Target protein: BSA 20ng, Membrane: PVDF membrane, 1st antibody - 1:5,000, 2nd antibody - 1:10,000. WEST-one™ had shown the result constantly. Not sensitive at incubation and expose time. But the result of other product had shown unstable data.

RevoScript™ RT-Premix Kit Temperature Revolution

Characteristics

1. A novel Recombinant RTase from Avian Retrovirus (75kDa)

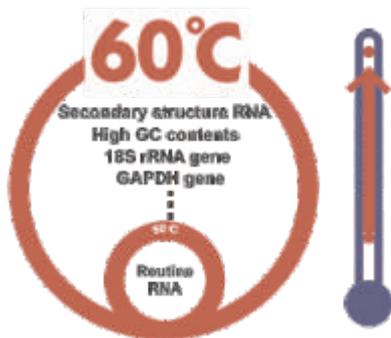

- REV-RT is a new Recombinant RTase which is not available from and other supplier.

2. Thermostable RTase (37~60°C, 50°C is optimal)

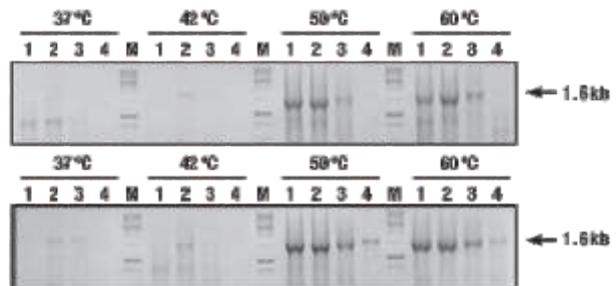

- Thermostable 60°C with excellent activity over a wide range of temperature.

REV-RT is a new Recombinant RTase which offers excellent advantageous over other commercially available RTase. Reverse transcription at higher temperatures minimizes the problems encountered with strong secondary structures. High temperatures also result in increased specificity of primer hydration and extension.

Pump up the temperature

Data of cDNA synthesis from RNA of complexed structure

Panel A: Supplier A product (Oligo dT type), Panel B: RevoScript™ Premix Kit (Oligo dT), Lane 1: 200ng RNA template, lane 2: 20ng RNA template, lane 3: 2ng RNA template, lane M: template control, and M: 100bp DNA ladder

3. Fast reverse transcription

- No extra step to resolve a secondary structure of RNA.
- REV-RT does not need pre-heating step and it makes possible fast reverse transcript.

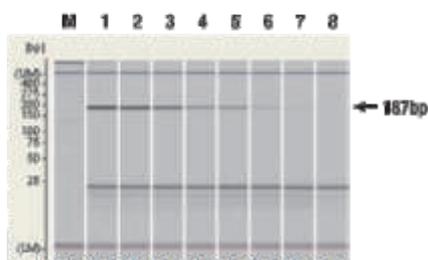

4. Ultra sensitive synthesis efficiency

- REV-RT shows high sensitivity of reverse transcription up to 0.3pg level of RNA.

5. Best to full length cDNA synthesis (over 9Kb)

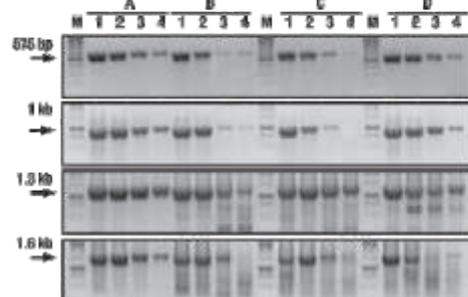

- REV-RT is designed to maximize synthesis efficiency of cDNA and shows outstanding results on large DNA fragments.

High sensitivity of cDNA synthesis
